

Ceramic Boat Hull

Ceramic coating for gelcoats and boat paints

page 1 of 1

Ceramic Boat Hull Cbh0.01 is a saltwater optimized ceramic coating and is used on gelcoats and boat paints, especially for application on the hull above the waterline for long-lasting protection. Can be used as a hydrophobic protective sealant for boats, yachts and water sports vehicles. The very thin, transparent and stable protective layer bonds permanently to the surface through a chemical reaction and visibly increases the gloss level and surface smoothness.

Areas of use

Coating for gelcoats and paints in the marine sector, boat hulls and decks above the waterline, yachts and crafts (e.g. jet skis)

Recommendations for use

1. pre-clean or wash the boat thoroughly with Hull PreCleaner alkaline, Hull PreCleaner acid or No Yellow Cleaner before the polishing and sealing process. Then rinse completely and dry.
